US-09-071-845-1727/C

Sequence 1727, Application US/09071845

Patent No. 6132967

GENERAL INFORMATION:
APPLICANT: Susan Grimm
APPLICANT: Dan T. Stinchcomb
APPLICANT: James McSwiggen
APPLICANT: Sean Sullivan
APPLICANT: Kenneth G. Draper
TITLE OF INVENTION: RIBOZYME TREATMENT OF
TITLE OF INVENTION: RIBOZYME TREATMENT OF
TITLE OF INVENTION: RIBOZYME TO LEVELS OF
TITLE OF INVENTION: RELATED TO LEVELS OF
TITLE OF INVENTION: NOLECULE-1 (I-CAM-1)
CORRESPONDENCES: 2390
CORRESPONDENCE ADDRESS:
ADDRESSEE: LYON & INVENTION
STREFT: ADDRESSEE: LYON & INVENTION

Sequence 12, Application US/08882164D

Patent No. 6306624

GENERAL INFORMATION:

APPLICANT: Beckett, Barbara R., Jones, Glenville

TITLE OF INVENTION: Retinoid Metabolizing Protein

NUMBER OF SEQUENCES: 43

CORRESPONDENCE ADDRESS:

ADDRESSEE: Blake, Cassels & Graydon

STREET: Dox 25, Commerce Court West

CITY: Toronto

COUNTRY: Canada

ZIP: MEILING

STATE: Ontario

COMPUTER: Canada

ZIP: MEILING

COMPUTER: CANBADLE FORM:

MEDIUM TYPE: Diskette, 3 1/2 inch, 1.4 Mb storage

COMPUTER: COMPAQ, IBM PC compatible

COMPUTER: ONDEACH IN MS-DOS 5.1

SOFTWARE: WORD PERRECT

CURRENT APPLICATION DATE:

APPLICATION NUMBER: US/08/882,164D

FILING DATE: June 25, 1997

j Sequence 2047, Application US/08435628

patent No. 5817796

general INFORMATION:
APPLICANT: Stinchcomb, Dan T.
APPLICANT: Draper, Kenneth
APPLICANT: Draper, Kenneth
APPLICANT: Dravis, Thale
TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR
TITLE OF INVENTION: TREATMENT OF RESTENOSIS AND
TITLE OF INVENTION: CANCER USING RIBOZYMES
NUMBER OF SEQUENCES: 2627
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 17;
                                                                                                                                                                                                                                                                                            Sequence 79, Application US/09017974

Sequence 79, Application US/09017974

Patent No. 6288042

GENERAL INFORMATION

APPLICANT: Rando, Robert F.

APPLICANT: Hogan, Michael B.

APPLICANT: Hogan, Michael B.

APPLICANT: Gosum, Paul A.

TITLE OF INVENTION: Anti-Viral Guanosine-Rich

TITLE OF INVENTION: Tetrad Forming Oligonucleotides

NUMBER OF SQUENCES. 88

CORRESPONDENCE ADDRESS:

ADDRESSE: Conley, Rose & Tayon, P.C.

STREET: Houston

CITY: Houston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Indels

Sequence 600, Application US/08584040

Patent No. 6346398

GENERAL INFORMATION:
APPLICANT: Pavco, Pamela
APPLICANT: Bacodo, Jaime
APPLICANT: Escobed, Jaime
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: OF VASCULAR ENDOTHELIAL
TITLE OF INVENTION: GROWITH PACTOR
TITLE OF INVENTION: GROWITH FACTOR
TITLE OF INVENTION: GROWITH FACTOR
NUMBER OF SEQUENCES: 8502
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon

ADDRESSEE: Lyon & Lyon

ADDRESSEE: Lyon & Lyon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score 12.4; DB 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 3, Application US/09788338

Sequence 3, Application US/09788338

Patent No. 648596

GENERAL INFORMATION

APPLICANT: MURAMATSU, TAKAMICHI

APPLICANT: KIYAMA, MASAHARU

APPLICANT: KIYAMA, MASAHARU

APPLICANT: KIYAMA, MASAHARU

TITLE OF INVENTION: NUCLEIC ACID SAMPLE FOR RARE

TITLE OF INVENTION: BYPRESSED GENES AND ANALYZING METHOD USING THE PREPARED

TITLE OF INVENTION: NUCLEIC ACID SAMPLES THEREBY

TITLE OF INVENTION: NUCLEIC ACID SAMPLES THEREBY

TITLE OF INVENTION: NUCLEIC ACID SAMPLES THEREBY

TITLE OF LINGBRICATION NUMBER: US/09/788,338

CURRENT FILING DATE: 1999-05-18

PRIOR FILING DATE: 1999-05-18

PRIOR FILING DATE: 1999-05-20

NUMBER OF SEQ ID NOS: 4

SOFTWARE: PATENTIN VOE: 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ORGANISM: Artificial Sequence

TITLE OF INVENTION: Mucleotide triphosphate and their incorporation into oligomucle;
CURRENT APPLICATION WHOBER: US/09/474,432B

CURRENT FILING DATE: 1999-12-19

PRIOR APPLICATION NUMBER: US 60/064,866

PRIOR FILING DATE: 1999-12-10

PRIOR FILING DATE: 1998-04-29

PRIOR FILING DATE: 1998-04-29

PRIOR FILING DATE: 1998-11-04

PRIOR FILING DATE: 1998-11-04

PRIOR FILING DATE: 1999-04-28

PRIOR FILING DATE: 1999-04-28

SEQ ID NOS: 1526

SOFTWARE: Patentin version 3.0

LENGTH: 17

TYPE: RA

ORGANISM: Homo sapiens
